

Open Our Eyes

Touch the roots, but
not the 'forbidden fruit'

by Peter Lim

The discovery of cancer is like a death sentence to many who are gripped with fear and uncertainties. For years, we were in the dark about the cancer challenges. For some, within a week, decisions are made to remove the cancer with so many questions left unanswered. We often overlook to deal with the root causes and even add more challenges to the cancer, causing the sick to have cancer repeats in a short period of time. Lives are therefore destroyed for lack of knowledge.

Genesis One is our inspiration in the NeB research to restore life with energy, organic food, and food-derived supplements and herbs to meet the cancer challenges. This animal instinct gives us a breakthrough in many discoveries to overcome cancer challenges and for others to further the research to save lives. Findings are not conclusive, but we believe the day will come sooner in treating cancer, with results that are even better than those on flu! There is light in the tunnel. We need to open our eyes to be free!

A Tumour, a Cyst, or an Inflamed Lymph Node

We are concerned by the touch or sight of a physical lump that we make quick decisions to get rid of it. What is important is not the physical size, but whether there is cancer and how much activity is in it. A client was told that

there was a mass substance shown in her scan results. With haste she agreed and took out part of the small and large intestines, only to discover in our report that it was only allergy formation. Tumours can be partly cancerous and non-cancerous, and cyst and inflamed lymph node can be removed naturally. Cutting the lump may create potential sites for more tumours to grow again due to pathogenic attacks. It could destabilise the body equilibrium and cause a chain of organ reactions and develop tumours in another site.

Root Causes of Tumours

Often, we don't know and don't even ask about the root causes, but simply deal with the tumours. Experience tells us that we must know to solve the roots, otherwise the problems will persist with cancer repeats. One client had the whole stomach removed in two operations because the cancer came back. Within half a year, cancer was found in the stomach edge, lungs and thyroid, with thyroid tumour partly non-cancerous. We traced the roots and found the parasites, allergies, microorganisms, and bird flu all attacking the body. We do not advocate touching the tumour unless it is really life threatening, as we deemed it as a "forbidden fruit". It is like white ants attacking the house. In two weeks, we dealt with the root causes using NeB and the cancer activity was down to zero. Tumours could return if pathogenic attacks are not effectively dealt with. A fourth-stage cancer could be reduced to zero once the roots are dealt with and unhealthy cells turning healthy again.

The Fallbacks

A young lady had cervical cancer and underwent drug therapy. It was a success. But within months, she developed leukaemia with the bone marrow and key organs destroyed. After the second round, she found that her bone marrow could not produce the blood cells and needed weekly blood transfusions. She still had the

uterus and ovary cysts with the blood cancer. She was under fierce attacks by mycoplasma, multiple sclerosis, bird flu, H1N1, dengue, and autism virus, including parasites, allergies, bacteria, toxins and microorganisms. Her fallback on bone marrow transplant is only 10% success. NeB research dealt with her infections and potentially removed the blood cancer in three weeks. But bone marrow activation remains exploratory. Before, during, and after drastic therapies, infections are high and NeB could provide a protective shield for a winning chance of recovery. Many had successful cancer therapies but they died due to infections.

Lifestyle Changes

Unhealthy lifestyles lead to the climax of cancer. A reverse would help prevent cancer repeats. Food is key to the recovery to build strong immunity. Avoid forbidden food labelled as "MOSA" for the first two years. Avoid "meat" and dairy, "oils" and fats (flax seed oil with quarks are good); "S" on sugar, salt, spices, starch, soy, seeds and sherbet. "A" on allergy-causing products including alcohol, aerosols, cosmetics, toxic detergents, chemicals and certain tea. Take organic-macrobiotic foods, and fresh organic juices with supplements and herbs free from harmful pesticides, chemicals and genetic modifications. Stay healthy. Drink alkaline water. Sleep early. Do moderate exercises. Clear bowels daily. Do something that uplifts you spiritually.
