

Parasites cause Havoc!

Parasites or worms can attack the human body in the skin, brain, spinal cord, intestines, stomach, bladder/urinary, uterus, prostate, kidneys, liver, heart, pancreas, bones, and including the blood. They deprive us of nutrients, donate toxins, damage and attack our organs and immune system, bring pain, diseases, cancer and imbalance to the body. They come from food, air, water and even from pets and insects. We have done research studies here using our nano energy booster patches to deal with this havoc. The following case studies are meant to keep us informed, to prevent and to effectively deal with these challenges.

By Peter Lim

Case study

A girl in her early teen was attacked by meningitis and from four to ten years old, she was hospitalised for six months and given medications. She grew up with a very severe twisted spinal cord and the parents were so helpless, seeing the child wetting the floor and unable to control her urinary system.

We found that she had high level of parasite attacking her spinal cord. Within a week of using our energy booster patches, she had energy in her urinary control. Within five months, she was confirmed to be parasite free. She was transformed from inward to outward looking with very positive spirit. We put her on spinal cord stem energy patch to help heal her spinal cord.

A two-year old boy has one of the highest records on parasite attack on both the cerebellum and cerebrum. He has fasciolopsis buski parasite or large flat worm which donates toxins and potentially leads to brain cancer. His dad insisted that he has autism. As we are good in autism, we told him that it is not so. The child is using our energy booster patches and we believe that the parasite would be swiftly dealt with. Failure to have the right remedy could lead to cancer, memory loss, affecting the various organs, nerves and stability.

A lady in her late thirties was suddenly down with stomach cancer. We told her it was not just stomach but also liver cancer as we found the fasciolopsis buski parasite in her liver. Her root causes are the parasite, potentially from her pet, and the environmental toxins of arsenic and other chemicals.

A lady in her forties had to abort two pregnancies and was told of hormonal imbalance. We found that she had high

level of parasite in her uterus that destroyed the cells of her unborn babies. She is on the energy booster patches for a good recovery. Her four month period cycle became one month after using the Sex Organ Stem energy patch. She is getting ready for her first child.

A lady in her early thirties had two young children. She complained of migraine, sleep disorders, low energy and body instability. An analysis found that she had very high parasitic level in her pancreas, intestines, cerebellum, cerebrum, adrenal gland, bladder/urinary and heart with equally high level of microorganism and plaques. She suffered much stress and memory loss. Within the first month of using our energy patches, her energy level went up four times and within five months, she "graduated" and was thankful for our help. We are helping to repair the brain with our Brain Stem.

A lady in her early forties suffered eczema for nearly twenty years with increased intensity, spreading from face, neck and to the whole body. We found the root cause to be parasite and aggravated by stress. She has mild cataract due to the use of steroids. She came to see us and we are working towards a breakthrough. Among all the diseases, eczema is our greatest challenge.

High sugar levels in the blood do not necessarily mean diabetes. They might be liver disorders caused by parasites or virus that fail in glucose conversion. These parasites could attack the bones and "eat up" bone calcium. Increasing calcium intake in order to solve osteoporosis and pain, creating potential build up of "stones" and plaques without solving the root problem, should not be the answer.

There are a number of beneficial foods that could potentially help rid us of parasites. One potential help comes from Adam's ClayMin. Clay is not only enzymatic but has antibacterial, antiviral and antiparasitic properties. If you need help, come and see us.

Eczema
