

There is Hope

Fight autism and win *by Peter Lim*

Many adults do not realise they have R1H2 autism virus since birth or from their spouse, which is passed down from generation to generation. They later discovered their children have autism behaviour, but do not link the challenge to themselves. To many, they see autism as having poor mental focus and brain disorder, memory loss, emotional and walking instability, language-speech-logic impediments, poor eye contact, migraines, living in their own world and being anti-social. But this virus destroys health and life and is a prelude to potential cancer as found in our NeB research.

Nature's Glory Findings

The issue before us is this – is autism a genetic or viral disorder? One healthcare group blames it on vaccinations, toxicities and allergies. A second group blames it on genetic disorder from generations. But based on our studies of 600 cases, the 99% key issue is R1H2 virus discovered by two professors. Our studies show that once R1H2 is removed, nothing will cause it to return unless the person is associated with a carrier through sexual intercourse. In one family, both parents and their two children were treated by us. The wife longed for a third child but fearful of a repeat. When she was six months' pregnant, we found both she and the foetus were clear.

A wife asked to check on her husband's health. All her siblings, spouses and children had been treated by us with good success.

R1H2 was found in him and linked to his dad, with many other infections which are potential tumour builders, with organ dysfunctions. We traced R1H2 to their three children. One of them, in her 20s, is found to have fibroid and breast cancer!

Our NeB Research

Our NeB research shows R1H2 resides in the sex organs, breasts and brain, to cause health havoc. Some experienced fibroids, ovary/uterus cysts, endometriosis, heavy and irregular menses, birth defects, aborted pregnancies or inability to give birth. Some ended up having cancer in the womb, prostate, breasts and brain. In one case, endometriosis was operated five times and ended as uterus cancer linked to R1H2!

Besides R1H2, pathogenic infections like bacteria, viruses, fungi, allergies, toxins and parasites on a pandemic scale attack the brain to cause mental focus and sleep disorders, with memory loss and even migraines. They do not affect the generations, but once removed, they could come back again! Our six-month therapy helps to remove R1H2 and infections in one to two weeks, repair and restore organs through stem cell energies to good functions to prevent health crises, with 60% to 90% success, depending on the severity. In recent

times and as early as in three weeks, most reported encouraging signs of better recovery. With a small fee, we could help find out whether the foetus is affected or before pregnancy, and help save future health nightmares. Once delivered, it makes sense for professional training and parental interventions to achieve a wholesome result!

NeB is potentially among the best in the world! We helped many across the ocean without the need of their coming to see us. NeB is based on five powerful sciences – aura, nano, quantum physics, homeopathy and stem cell technologies, with no known side effects!

Never Lose Hope

Parents are talking. Teachers are talking. This gives us great motivation to further our research. Our aim is to give hope to those who believe in what we do. Those that are sceptical are given another chance to realise their hope. All these years, people are fighting autism but failed because they have no answer except to talk about it. Many just gave up hope. For us, there is real hope; and we are seeing results in every case, some sooner than later.
