

Golden Oyster Mushroom

Japanese scientists confirmed its potential double potency over other mushrooms against cancer cells.

The productive stimulation of cytokine IL-12 by Bio-Good in human matured dendritic cells

Leukemia cells with immature dendritic cells

Activated matured dendritic cells with Bio-Good against leukemia cells.

Very encouraging local inspiration

A man in his forties found he had nose, neck and liver cancers in July 2008. His eighteen chemos helped remove all the cancers, leaving the liver cancer from two to one cm. After 33 radiotherapy sessions, his liver cancer went up to three cm, spreading to his small and large intestines.

In June 2009, while going through his second bout of chemos, he sought help. We took a digital photo and found his cancer was due to environmental toxins, possibly from his work. He began to take Golden Oyster Mushroom (GOM), increasing from one to three packets a day together with fermented brown rice plant capsules. He started to use our energy booster patches in Oct 99. His chemo ended in Nov. By Mar 2010, his scan showed his liver cancer was stable to one cm and by May, it was down to 0.2cm. He was so inspired and shared he takes organic food and vegetables, algae, plum balls, Vitamin C and others, but no oil, sugar, meat and salt.

1Q : Why is Golden Oyster Mushroom (Tamogi-take) so good?

A : Hokkaido GOM contains very high concentration of (1→3) - β - D - Glucan (112mg/80ml), many times higher than many known medicinal mushrooms. Recently Beta Glucans has been widely researched for its strong ability to stimulate the immune system against cancer, as well as its anti-angiogenic effects (prevents formation of blood vessels to starve cancer cells to induce apoptosis, or death to cancer cells while protecting healthy cells). Studies done on mice showed a 60 per cent tumour reduction just within two weeks!

2Q : Is the report of its anti-cancer efficacy published?

A : Yes, the anti-tumour effects were presented at the 96th Meeting of the American Association for Cancer Research in April 2005 by A/Prof. Kazunori Kato of Sapporo Medical University, Japan. The reported findings of GOM were based on the **research done on Bio-Good** for its distinguished technology in the cultivation, temperature control and liquid extraction done in Hokkaido.

3Q : What are its other health benefits?

A : It is anti-radicals due to the presence of phenolic compounds; anti-mutagenic, protecting cell mutations due to linoleic acid; and anti-hypertension due to the presence of D-mannitol. It helps glucose level control due to the presence of a peptide and rich in ergosterol (Vitamin D), for calcium absorption and stronger bones.

4Q : Why is BIO-GOOD so special?

A : Its special liquid extraction allows quicker and maximum absorption and potency effects with hardly any residues. Most mushrooms are in powder, raw or dried form and take longer time to absorb, with undigested fibres posing potential toxin built up in a weak body system.

5Q : How is BIO-GOOD best taken?

A : It is best taken before, during, and after treatments. Take one to three packets daily, one hour before food, the last packet fifteen minutes before bed time.

6Q : Are there testimonials to support the goodness of Bio-Good?

A : Yes, many testimonials are found in our website covering cancer of lungs, brain, intestines, stomach, prostate, esophagus, pancreas and breast, all with good results.

7Q : What is FACT 99?

A : It is a fermented antioxidant cellulose treatment made from brown rice plant, fermented for 400 days, discovered by Dr. Hanaoka of Japan. 21 times more potent than Vitamin C without any side effects, turning harmful free radicals to harmless water, it is a very powerful antioxidant against free radicals. This allows the body to naturally repair and heal the damaged cells and be given the chance to recover to healthy cells.

It helps promote liver enzymes function to perform well in metabolism, storage, filtration, toxin excretion and glucose conversion. Diabetics are normally required to reduce their calorie intake with modern medicine. But with FACT 99, this is not necessary which makes it a very special product to pay attention. Acute toxicity tests were carried out by the Litchfield Wilcoxon test and found it to be safe.

8Q : What other products could help in anti-tumour?

A : Organic food with higher nutrients and free of toxicity; Chlorella, green algae and Chlorella Growth Factor extract for protein, blood cleansing, detoxification and generating new healthy cells; Plum Balls to protect the liver; Aloe Vera Concentrate to enhance immune functions; Kombu seaweed with anti-cancer properties; Ecomer to increase white and red blood cells and platelets; Badmaev 269 to detoxify heavy metals and environmental pollutants; Nutrizyme to strip the external coating of cancer cells for immune system to recognise and attack; pH Balance Plus to reduce overly acidic environment to prevent cancer cells to thrive; Herbs dedicated to specific cancer; Olive Gold, an oxygen therapy in olive oil; Flax oil with cottage cheese (Budwig Protocol) for cell health; Energy booster patches to uproot the root causes for immune system to fight back; Salvesterol, an organic fruit and vegetable extract capsule, to cause potential death to only cancer cells.
