

## TESTEMONIAL (AUTISM CASE)

**Ms. E.A**

My child who has Attention Deficit Disorder has been under the care of Peter Lim from Nature glory for the last one year.

Before, he was on Ritalin medication for about nine months. Initially, his grades and behaviour improved but the dosage had to be increased periodically in order for him to sustain his attention. I did not want him to be on drugs forever and I knew well there could be adverse side effects from Ritalin. I decided to stop his Ritalin medication. Looking for alternatives, I turned to NEB therapy, after about 2 months, I see better attention span in my son and his immune system has also improved, hardly falling sick. I was also very impressed when Peter knew what was wrong with him even without me telling him like he hurt his bone - he had a fall while skating and Peter immediately prescribed him with NEB for pain management and bone recovery. He also knew he had a scar and gave him scar therapy - this was without any information provided to him.

Peter has also been very helpful attending to my SMSes whenever I needed advice. He also runs impromptu programmes to speed up Yujie's recovery during period of flu.
