

Viruses cause Havoc!

Viruses can attack the brain, bone, eyes, heart, liver, lungs, kidneys, nose, pancreas, sex organs, skin, stomach and throat, leading to diseases and cancer. Our local research traces the root causes of the individuals and some could be linked to children's children if timely answers are not found, with untold sufferings. It is wise to deal with the root causes rather than the symptoms to prevent endless health challenges.

By Peter Lim

Mum with breast abscess

A month after giving birth to her second child, a young mother developed a breast infection. It soon became a growing lump and breast abscess, causing her to be unwell with a high fever. Medication did not seem to help and the doctor recommended doing an Incision and Drainage Surgery. This involves general anesthesia, surgery to cut open the abscess to drain out the pus, with three weeks of cleaning and changing the dressing daily till the wound is healed. Two days before the surgery, we looked for the root causes and found her to have Hand, Foot, and Mouth Disease. At midnight to the day of surgery, we found she had H1N1 including toxins, with the lump growing bigger. She applied the recommended energy booster patches and in a matter of hours, the doctor confirmed the swell subsiding with no trace of pus! Surgery was prevented with great relief!

Man with artery blocks and strokes

He is in his late forties - had four artery bypass two years ago, with two strokes within three years. He suffers daily migraines, with high blood pressure and cholesterol, and is under medications. The energy levels of most major organs were low. We warned him of his potential heart attack and stroke as the arteries were found to be seriously blocked again. It could take three to four months to help him clear the blockages using energy

booster therapy. Less than a month after, he had diarrhea and vomiting after taking expired yogurt and had to be hospitalised. Test showed that of the four arteries involved in the bypass, two were blocked up to 75 per cent, with two others at 50. Angioplasty was done on two arteries.

We traced the root of his health challenges to the autistic virus R1H2 found in high degree in his cerebrum, believed to be present since birth. This virus affected the brain and the organ functions and is believed to be causing the narrowing of the blood vessels linked to his migraines. His wife and three children could have inherited his virus.

Woman with artery blocks, diabetes, and brain attacks

She is in her early seventies with countless health woes and operations. She has lung blood clots, diabetes, cataracts, sinus, asthma, stress incontinence, tonsillitis, thyroid disorder, swelling knees, trembling hands, spine and lower back pain, facial nerve pain, overweight and sleep disorders. We confirmed she has high artery blocks, diabetes affecting her pancreas and liver, eye retinopathy which could lead to blindness and memory loss.

We believe the root cause is the Epstein Barr Virus (EBV) found in her cerebrum that may have caused dysfunctions in her organs, including trembling and memory loss. EBV could lead to cancer of the nose, lymph nodes, stomach, breast, bone

marrow and muscles. Her energy balance was improved by 50 per cent within the first month, with very encouraging progress.

Woman with attacks on brain, uterus and memory loss

She is in her mid fifties without realising she has the "autistic virus" since birth after tracing her roots. The virus attacks her cerebellum and uterus, causing memory loss. Her daughter was prematurely born (probably due to the virus), with sleep disorders and hormonal imbalance. Her daughter had a very big ovary cyst operated while in her teens and we believed the autistic virus could have caused it. After five years, we found now that she has a high level of parasite attacking her ovaries and uterus. She has high level of diabetes affecting her pancreas, liver, blood and eyes, with hormonal imbalance.

Her elder brother has speech impediment, no eye contact and epilepsy. His root cause is the very high level of R1H2 attacking his cerebellum, with artery blocks and stress. His dad is confirmed to have high level of artery blocks, stress and hormonal imbalance. We believed his ailments are also linked to the R1H2 attacking his cerebellum. This virus appears to attack family members, causing many health challenges. Many have lived with it and discovered only in later years.
